Created on 07/22/2019 14:17:55.
Modified on 04/17/2021 11:07:34.

Detailed users' information through multiple security profiles.

Remote monitoring of your field team technicians.

Easy and complete control of your warehouse, inventory, material assignment, loans between field technicians, suppliers, general inputs and outputs.

#	Material name	Reference	CRM Id	Quantity	Unit
128	3M 5000 Series Half Mask OV Respirator	1423612	INV-001	15	NA
129	Caution/Cuidado Bilingual 2 mil Barricade Safety Tape - 3in	41231242	INV-002	25	Inch
130	Electrical Wire	12412512	INV-003	50	Meter

Bloom allows for complete traceability of your inventory, minimizing sunk costs for loss of material.

Quick and easy adaptability for all types of processes.

Easy configuration of the entire operation directly from your desktop.

Management and general view of all events related to the dispatch center or mobile devices through the audit trail window.

Number of records: 1388

Allows for complete control of your operation through the monitoring of all status change updates within the field work order.

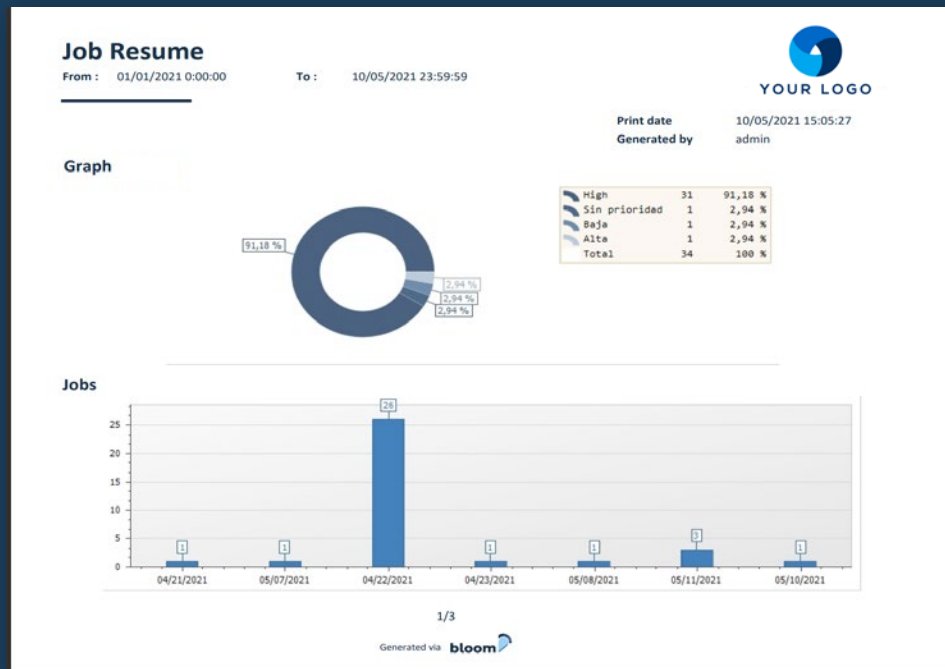

Client and contract management associated to your operation.

Management of 100% dynamic forms that allow our clients to adapt Bloom to each one of their processes in an easy and intuitive way (maintenance and repairs, emergency care, customer service, among others).

Bloom allows for creating reports of inventory balance, technician performance, and managerial indicators of each one of your processes. Easily exported in different formats (PDF, HTML, DOC, XLS, among others).

Manage all of your certification requirements for your personal, vehicles and materials organized and configure alarms for expiration dates. This will allow you to keep everything up to date, minimizing any penalty-related fees due to expired documentation.

GEOLOCALIZATION

Bloom facilitates order allocation from the dispatch center by calculating the optimal route of travel based on geolocation criteria, proximity, traffic, availability, type of work order, priorities, and pre-defined attention times, thus increasing staff productivity. Not only can this task be automatic, but it can also be done manually, based on the dispatch center informed decisions.

MOBILE

AVAILABLE IN
ANDROID

SOON
FOR **iOS**

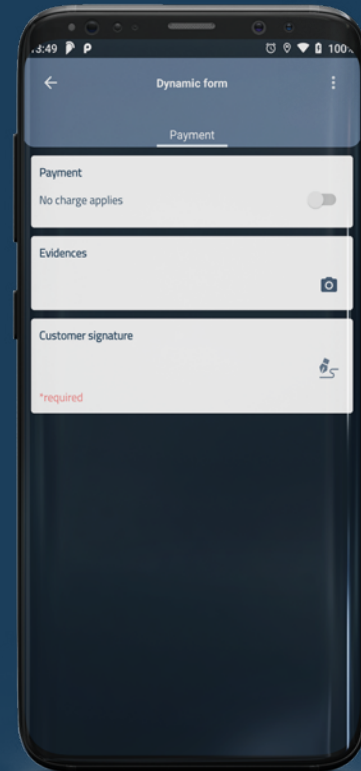

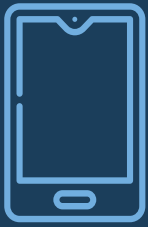

STATUS UPDATES

It allows to view in real-time work order status changes made by field technicians, thus leading to better management and fulfillment of your processes on time and efficiently.

OFF-LINE

Not enough coverage? No problem! **Bloom** allows you to work off-line with automatic retransmission of the information taken in the field by your technicians to your control center once it reaches cellular connection.

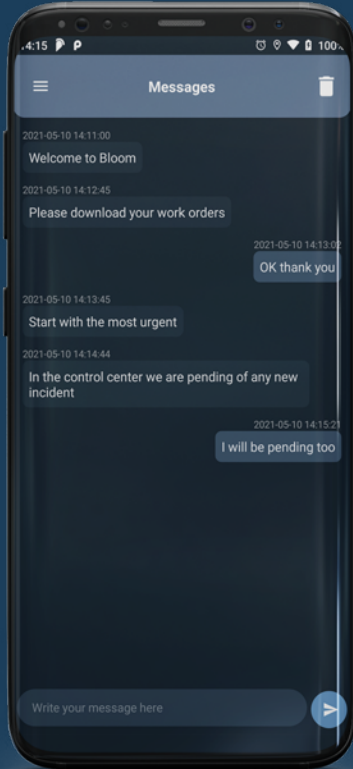

MOBILE

AVAILABLE IN
ANDROID

SOON
FOR **iOS**

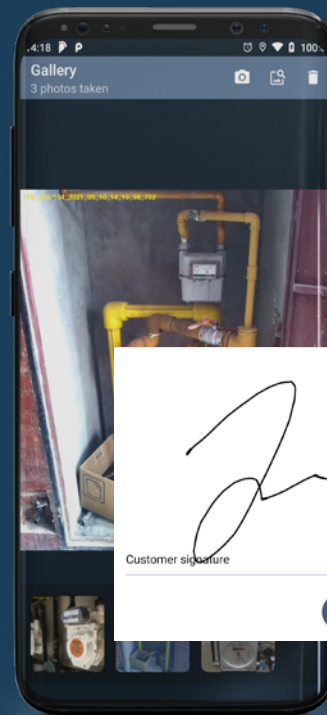

NOTIFICATIONS

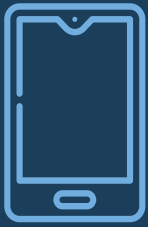

Real-time notifications of registration and direct contact with your workers through PUSH/PULL technology for a faster and reliable communication.

PHOTOGRAPHIC EVIDENCE

Bloom allows to capture, compress and automatically synchronize photographic, video-graphic, and electronic signatures evidence while saving storage space and battery usage in order to end work orders, thus providing a complete control of the jobs done out in the field.

Your clients will thank you!

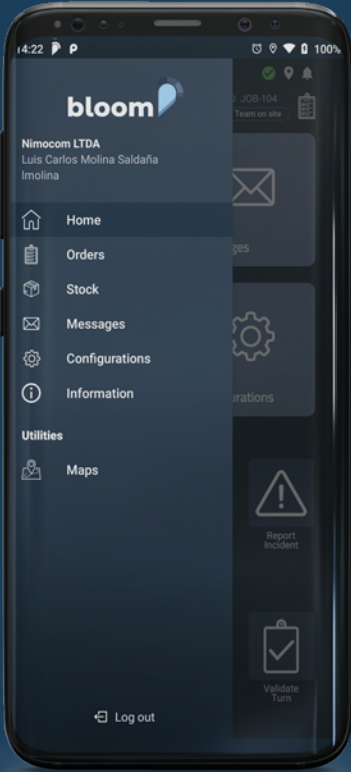

MOBILE

AVAILABLE IN
ANDROID

SOON
FOR **iOS**

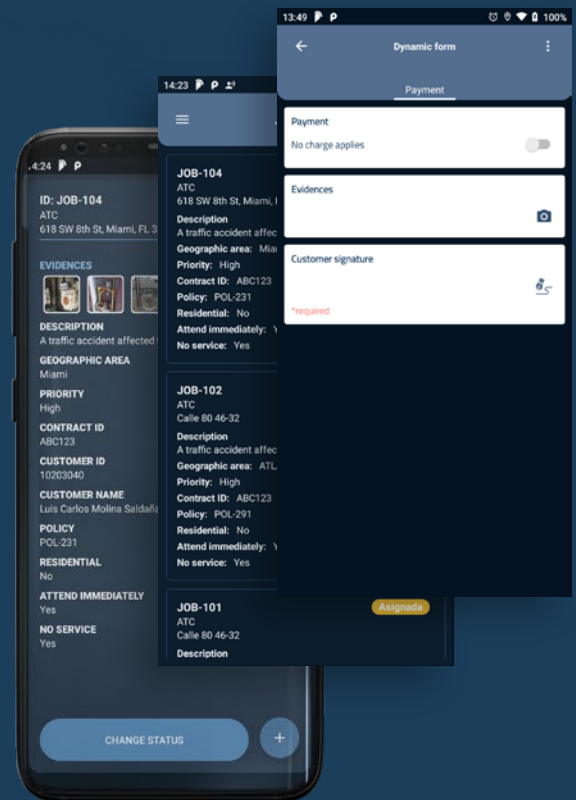

NAVIGATION

Friendly and intuitive navigation through each process of your field operation, thanks to dynamic and easy-to-use templates.

REGISTRIES

It allows your technicians to fill out forms directly from their mobile devices and can easily connect with portable printers for the printing of reports required by your work order processes.

SECURITY

Bloom understands how important data security is for our clients, that is why we have focused on providing the highest data security available required by information protection standards in order to set our client's mind at ease that your processes, end customers and other information is well protected.

Bloom has point-to-point computer security through communication protocols and encrypted databases.

Standardized two-way integration with CRM/ERP systems through Web Services.

Bloom not only protects your information, but it also prevents your operation from stopping by configuring high-availability options through the online synchronization of master and slave servers.

If your staff has state-of-the-art smartphones, **Bloom** allows you to control security through facial recognition or fingerprint, not only allowing the quick-start of their tasks out in the field but guaranteeing the safety of your clients and your operation (Optional).
